

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: Power Puff Girls

Project / Product Name: Prism Edgelens

Organization / Institution (if any): _____

Submission Date: 08-05-2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project?

Yes

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming : No

Code generation or assistance : Used antigravity

Antigravity was used to generate and scaffold core pipeline components, including the input parser, scoring system, data retrieval module, and output formatter. Generated code was reviewed and modified by the team before integration.

UI / UX design: Used antigravity

Antigravity assisted in designing the user interface and structuring the evaluation report layout for a clean, engineer-readable output experience.

Content creation : No

Data analysis: GitHub Open sources/Repositories

GitHub open-source repositories and HuggingFace model metadata were used as live data sources to retrieve, compare, and analyze AI models based on task relevance, popularity, and edge deployment suitability.

Testing / debugging : Used antigravity

Antigravity was used to assist in identifying logical errors, validating scoring outputs, and debugging the feasibility evaluation pipeline during development.

Other _____

4. Feature Origin Classification (Please add/delete based on the number of the feature)

Feature 1 : Feature Name: Input Parser (Natural Language to Structured Data) **Origin:** Both (Self-Generated + AI-Generated) **Description:**

- **AI Tool / Platform Used:** Antigravity
- **Prompt Used:** *"Parse the user's natural language project idea and extract structured fields: task type, data type, deployment environment, and constraints such as latency, memory, FPS, and offline capability."*
- **Output Summary:** A structured JSON-like object containing task, device, and constraint fields extracted from free-form user input.
- **Modification:** Logic was manually reviewed and refined by the team to handle edge cases and ambiguous inputs.

Feature 2 Feature Name: Data Retrieval Module (HuggingFace + GitHub) **Origin:** Both (Self-Generated + AI-Generated) **Description:**

- **AI Tool / Platform Used:** Antigravity; GitHub Open Source Repositories
- **Prompt Used:** *"Fetch relevant AI models from HuggingFace based on task tags and retrieve related GitHub repositories sorted by star count and relevance."*
- **Output Summary:** A list of models with metadata (tags, task support, download counts) and repositories with popularity metrics.
- **Modification:** API call structure and filtering logic were written by the team; AI assisted in scaffolding the retrieval pipeline.

Feature 3 Feature Name: Model Filtering Engine **Origin:** Self-Generated **Description:**

- **AI Tool / Platform Used:** N/A (Rule-based logic written by team)
- **Prompt Used:** N/A
- **Output Summary:** Filters out models that are incompatible with the target device, unsupported task type, or exceed memory/latency thresholds.
- **Modification:** Entirely designed and implemented by the team based on predefined compatibility rules.

Feature 4 Feature Name: Feasibility Evaluation (Rule-Based Scoring) **Origin:** Both (Self-Generated + AI-Generated) **Description:**

- **AI Tool / Platform Used:** Antigravity
- **Prompt Used:** *"Evaluate model feasibility based on model size vs. available memory, latency vs. requirement, and availability of quantization or pruning optimizations."*

- **Output Summary:** A Feasibility Score (0–100) per model based on real-world constraint checks.
- **Modification:** The scoring weights and thresholds were manually tuned by the team to reflect realistic edge deployment scenarios.

Feature 5 Feature Name: Match Score & Confidence Score System **Origin:** Both (Self-Generated + AI-Generated) **Description:**

- **AI Tool / Platform Used:** Antigravity
- **Prompt Used:** *"For each retrieved model, compute a Match Score based on task alignment, data compatibility, trend relevance, and edge suitability. Compute a Confidence Score based on source popularity, download counts, and availability of real implementations."*
- **Output Summary:** Two numerical scores (0–100) per model — Match Score and Confidence Score (Low / Medium / High) — used for final ranking.
- **Modification:** Scoring formula and confidence thresholds were defined by the team; AI generated the initial skeleton logic.

Feature 6 Feature Name: Model Ranking & Rejection Module **Origin:** Self-Generated **Description:**

- **AI Tool / Platform Used:** N/A
- **Prompt Used:** N/A
- **Output Summary:** Ranks models from best to worst based on combined Match + Feasibility + Confidence scores; outputs a "Rejected Models" list with specific disqualification reasons.
- **Modification:** Entirely implemented by the team using deterministic sorting logic.

Feature 7 Feature Name: Explanation Layer (LLM via Ollama) **Origin:** AI-Generated **Description:**

- **AI Tool / Platform Used:** Ollama (local LLM); Antigravity (for integration code)
- **Prompt Used:** *"Given the ranked models and their scores, generate a concise human-readable explanation for each model covering: why it is suitable, what trade-offs exist, and what optimizations are recommended for edge deployment."*
- **Output Summary:** Natural language justification for each recommendation, including trade-off analysis and optimization suggestions (e.g., quantization, pruning).
- **Modification:** Prompt was iteratively refined by the team; output format was constrained using a strict template to ensure consistency.

Feature 8 Feature Name: Structured Evaluation Report (Output Formatter) **Origin:** Both (Self-Generated + AI-Generated) **Description:**

- **AI Tool / Platform Used:** Antigravity
- **Prompt Used:** *"Format the evaluation output into a structured report including: Project Summary, Top Recommendations, Rejected Options, and Final Suggestions."*
- **Output Summary:** A clean, engineer-readable report with all scoring, reasoning, and optimization suggestions in a standardized format.
- **Modification:** The output template and section structure were defined by the team; AI assisted in generating the formatting code.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: HM Chaitra

Role: Backend developer

A handwritten signature in black ink that reads "Chaitra". The signature is written in a cursive style and is underlined with a single horizontal stroke.
